

Covid Certificate Check – Automated access control with verification of the „green passport“

GANTNER is the specialist for proven, integrated, and secure access solutions. The current access restrictions and the verification of a Covid-19 clearance certificate (“green passport”, “Covid certificate”) represent a major challenge for many operators.

In addition to the existing product range, GANTNER offers a solution for the automated, secure control of the digital EU Covid certificates.

It is very easy to automate the checking process without having to mobilize personnel to check certificates. Members and visitors benefit from fast, secure access without waiting times and operators have the advantage that the guidelines are adhered to without blocking their employees.

EU Digital Covid Certificate

Benefits

automated

- Fast registration of many people - 24/7
- Without personnel costs
- Automatic updates

secure

- Complete recording
- No health risk for staff
- Regulation-compliant implementation of the Covid certificate checks

professional

- Fixed installation for professional use
- Maintenance-free without batteries
- Sustainable access control ready for future use

How it works

1. Check for Covid Certificate

- The visitor has a QR code on their smartphone or printed out
- The reader scans the QR code
- GT7 checks the validity of the QR code and compliance with the entry regulations
- GT7 issues „OK“ for Covid security and enables regular access control

2. Check for Access Authorization

- Hold the RFID data carrier in front of the GT7
- Club management software checks the membership eligibility
- GT7 grants entry through the access gate

What do you need for the solution?

+ AccessApp with Covid Certificate Check

or

The automated Covid Certificate Check consists of a proven GANTNER access system plus an additional certificate check function. The investment is always worthwhile, perfectly integrated into any leading club management software: Even after the end of the protective measures, the professional and sustainable access control system remains in place. Only the certificate check function is deactivated. However, scanning QR codes will still be possible (e. g. for promotions). No more unregistered access, and all without any additional personnel costs.
